SKILLS

Languages

French Native
English Professional (C1 level)

Programming Languages

C | C++ | C# | Lua

Game Engine and Frameworks

Unreal Engine | Unity | OpenGL | .Net | SFML

Tools

GitHub | GitLab | Premake | Jenkins | Visual Studio | Figma | Trello | Notion | Wwise

Methodologies

Agile/Scrum, Code review, Prototyping

FORMATION

Creajeux
Bachelor Programmation de Jeux Vidéo
Jeux Video et Ingeniérie Logicielle
2021-2025

EXPERIENCES

Nov 2025 - Present | **Projet DeMETeRE - URCA** | Fixed-term
Software Engineer

- Designed and developed an educational Unity simulation introducing robotics and automation to middle and high school students, with a focus on accessibility and adapted interaction with real-world industrial concepts.
- Worked closely with graphic designers, instructional engineers, and university lecturers to ensure both pedagogical alignment and visual clarity throughout development.
- Built custom testing and debugging tools to streamline QA workflows and reduce errors ahead of classroom deployment.
- Deployed the simulation in live classroom settings, gathering direct feedback from educators to guide iteration.

May 2025 - Nov 2025 | **Projet DeMETeRE - URCA** | Intership
Software Engineer

- Built Reims3D, a real-time 3D digital twin of the city of Reims, targeting both desktop and VR platforms in Unreal Engine.
- Owned the full technical pipeline, from procedural city generation using OpenStreetMap data to real-time traffic simulation via Unreal Engine's ZoneGraph and Mass Traffic systems.
- Operated in an R&D environment using GitLab, Trello, and Notion.

Mar 2024 - May 2025 | **Bubble Raccoon Studio** | Academic Project
UI and Technical programmer

Cosy Sushi
- Implemented core UI systems and a data-driven architecture for a 3D life-simulation and restaurant management game in Unreal Engine.
- Contributed to farming and restaurant management systems.

Tales of Scales
- Designed a procedural grass renderer using compute shaders, optimized for large open-world environments.
- Developed UI systems with Unity UI Toolkit.

PROJECTS

Sapphire
A 2D game engine build with C++ and OpenGL, featuring an editor and ECS architecture.

C++ | OpenGL | Premake | GitHub | Visual Studio

Unity Event Dispatcher
A lightweight event system for Unity that allows decoupled communication between different parts of your application.

C# | Unity | GitHub
